Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 62-128911 (newly cited).

The 62-128911 reference discloses particles of heterogenite (CoOOH) having a preferred average particle size of 0.1-1 micron. The '911 disclosure differs from the claimed invention in that the '911 disclosure does not specify the surface area as required by the instant claims. This difference is not seen as resulting in a patentable distinction between the prior art and the claimed invention because:

a) The particles of '911 and those as claimed appear to be chemically identical.

b) In the present specification, various examples of the present invention are disclosed, and these examples are stated to have a particle size in microns ranging from 0.4 (example 7) to 1.05 (example 11). This range significantly overlaps the preferred size range of the prior art.

Given that the prior art powders and the presently claimed powders appear to be both chemically the same and significantly overlapping in particle size, one of ordinary skill in the art would have concluded that the surface area of the prior art particles is likewise the same as those of the inventive particles. Consequently, a prima facie case of obviousness is established between the '911 disclosure and the presently claimed invention.

3. In a response filed June 2, 2003 (Certificate of Mailing dated May 29, 2003), Applicant presents arguments to distinguish the claimed invention from the previously applied Yamada, Ohta, and/or Nakamura patents. The examiner has withdrawn the rejection based on these patents and made a new ground of rejection *supra*, and asserts that the newly cited disclosure is clearly more relevant to the invention as presently claimed.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Wyszomierski whose telephone number is (703) 308-2531. The examiner can normally be reached on Monday thru Friday from 8:00 a.m. to 4:30 p.m. Eastern time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King, can be reached on (703) 308-1146. The fax phone number for this Group is (703) 872-9310 for all correspondence except for After Final amendments in which case the Fax number is (703) 872-9311. The Right fax number for this examiner is (703) 872-9039. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.
